to me

Hi Mam,

Please find my college experience below,

-----

I studied in Meenakshi Sundararajan Engineering College (2015- 2019 batch). I'm currently working in Infosys as Senior Systems Engineer. I got this wonderful opportunity through Campus placement. I'm grateful to share my unforgettable experience and memories of my college Life, as it was one of the most remarkable and lovable times of my life. While the purpose of college is getting an education, it is also a unique and unforgettable time, with memories that will last for a lifetime. For every person, College Life has a different meaning. Likewise, it took me to the next and best phase of my life.

Coming to education quality, my college possesses all the qualities of an ideal college. We have an excellent course curriculum and faculty members. Our faculties have always been supportive and helped us to identify our potential and guides us which career we should choose & in which industries we can accelerate well in terms of our skills and abilities.

In my college life, along with studying, my friends and I enjoyed learning new things through conducting symposium events, preparing for a group presentation in E-cube and so on. Overall my college helped me in identifying my skills and knowledge with distinctive experience. Despite climbing the ladders of success, I will cherish the memories of college life forever.

- Reethika Basil 😊

## MY JOURNEY AT MSEC

College life is known as one of the most memorable years of one's life. It exposes us to new experiences and things that we were not familiar with earlier. Similarly, for me, MSEC provided me a complete 360-degree experience as a college student. Not only, I became academically strong, but I learnt a lot of life lessons. The transition from being a school student to becoming a responsible citizen was so smooth at MSEC.

Initially, when I first stepped into the college campus, I had so much questions and thoughts that were running through my mind. The thoughts were about the campus life, my successful future, placements. Along with these thoughts, came fear and anxiety. But, all these thoughts vanished away during the orientation session, where our beloved and respected secretary mam Dr. K.S.Bhabai mam spoke about how MSEC strives to give it's best for every single student and now I am so glad that I chose the right decision of studying here. Also, we learnt Japanese language, as an additional language course, which is now helping me get jobs internationally.

All students, were given equal opportunities to participate in various activities like Sports Day, College Day and other voluntary activities. To be honest, I have never taken part in any technical activities and leadership roles in school. But, when I became the Class Representative, I was so happy and I gave my fullest in fulfilling my duties. Also, the technical events like E-cube made me research various underlying topics and research work in the field of Information Technology.

**WORKING BASIS**

Python is a popular and powerful interpreted language. Unlike C, Python is a complete language and platform that you can use for both research and development and developing production systems. There are lots of modules and libraries to choose from, providing multiple ways to do each task. It can learn and adapt.

The best way to get started using Python for machine learning is to complete a project.

It will force you to install and start the Python interpreter (at the very least).

It will give you a bird's-eye view of how to step through a small project.

It will give you confidence, maybe to go on to your own small projects.

When you are applying machine learning to your own datasets, you are working on a project. A machine learning project may not be linear, but it has a number of well-known steps:

- Define Problem.
- Prepare Data.
- Evaluate Algorithms.
- Improve Results.
- Present Results.

**Machine Learning**

The diagram shows a central circle labeled "Machine Learning" connected to four surrounding circles: "Supervised Learning", "Unsupervised Learning", "Reinforcement Learning", and "Deep Learning".
