Screen reader software

NVDA:

NV Access is a non-profit software development company founded by Michael Curran in 2006. He created portable screen reader software Non-Visual Desktop Access (NVDA) for helping blind people (or blind users) for accessing computers with windows OS. It is open-source software created in python which allows anyone to modify and suit their language. Currently, this is the second most used software for screen reading in the world and available in more than 55 languages.

In the institution, this software is installed in a computer for each department for helping blind people.
