TESTIMONIALS

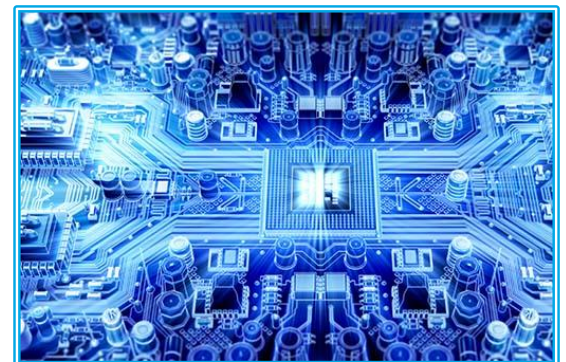

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Have you ever wondered, Why “Electronics and Communication Engineering” found you to be a part of its growth?

Today, we are witnessing the tremendous transformation of our world with the skyrocketing developments in electronics and with digitalization becoming a need for every organization from healthcare to entertainment. The increasing interdependence of software and hardware industries enables Electronics and Telecommunication to evolve as a promising domain for budding engineers. Our department being a connection between various industries provides you the preparation to be a part of which narrow stream you desire the most, including Business, Computer hardware, Computer software, Nanoengineering, Photonics, Biomedical engineering, Robotics, Aerospace industry, and so on. WIRED, our newsletter will keep you updated with all the events and information that you need to explore your interests. Take time to read to know about what goes behind each event.

NAME: MADHUMITHA.G
DEPT: ECE
BATCH: 2019-23
COMPANY: VIRTUSA

I was interviewed by Virtusa. Round 1: First, they conducted an online written test. In this round, we were asked some aptitude and technical questions and they were all related to OOPS concepts, Java, DBMS, software engineering and testing, hands-on-coding, etc. Round 2: In the technical HR round, started with tell me about yourself, some aptitude questions, why do you want to join software company being an ECE student and asked to do some hand-on-coding. Round 3: It was HR round, the interviewer asked some questions on core java, tell me about yourself and why do you want to join Virtusa. I practiced questions related to Verbal Ability, Quantitative Aptitude, and Logical Reasoning.

For technical, I focused on Object-Oriented Programming, Database Management System, basics of Networking and a programming language like C, Java and Python. I prepared myself with few of the most commonly asked HR questions like tell me about yourself, why you want to join us. Apart from this, I had two internship experiences that helped me largely to bag the job offer. Placement cell is a pillar of strength which provided complete support to achieve my career goals. Trainings on aptitude and technical were conducted. Mock interviews and group discussions were conducted to help us gain confidence. Frequently asked questions were shared and placed students were called to share their interview experiences which made me to grab job opportunities easily.

NAME: AKASH.H
DEPT: ECE
BATCH: 2019-23
COMPANY: VIRTUSA

I got placed in Virtusa for which I need to thank my college for conducting trainings at the right time and helped me to gain skills and be well versed in aptitude.

15 days training on full stack Java was conducted which gave me a peek into web development and gain interest in that domain . It was conducted practically give us challenges to complete which was very useful and interesting. We were given training on quants , logical , English and programming for 2 weeks which was very useful to crack aptitude test. Focusing more on placement training was very useful for me to prepare for the placement rounds .

I used to practice more of aptitude questions as I was weak in it especially answering them on time . I spent daily 1 hour on it and solved problems on each section . My first company was Zoho which I went till last round. It was a good leaning experience of my weakness and I worked towards it . Second was Virtusa where 1 round was online test for 3 hours which was at intermediate level for me . I passed it and the rest of the rounds which was technical and HR round was easy to pass . It was great pleasure to get placed in a company which is due to the measures taken by the collage and my homework.

BATCH: 2019-23
COMPANY: KAAR TECH.

It was a Monday at 10 AM when I was in Kerala vacationing with my friends. When suddenly my best friend exclaimed that I had gotten placed. When I heard that, I was on cloud nine as so was everyone around me. And that day got added to the list of my favourite days. Because I realized that I have the most wonderful people around me. Now looking back, I remember I attended the HR interview also while I was on vacation. Bala sir called me prior to prep me for my interview. One would not expect anyone to experience a vacation the way that I experienced it.

I was happy, excited and nervous all at the same time. It stressed me a little bit since I was the first one to be interviewed that day and I was not even in the position to ask my fellow students regarding the whereabouts of their respective interviews. But once the interview was finished, I was very confident that I'm going to be placed here. I am very grateful to our Bala sir and Velu sir for helping all the students during the whole process. They understand how stressful and pressurized the whole process is and help us all get ready to face anything. They provided us with all study materials and guidance whenever it was necessary. They even directed us how to present ourselves in the HR level interviews. The motivation they gave me made a huge impact and moulded me professionally to be placed within the first 20 students out of all 500.

Hello everyone! My name is S.Gowtham. I'm currently pursuing a B.E. at Meenakshi Sundararajan Engineering College in the domain of electronics and communication engineering. Recently, I got placed at Kaar Technologies in the role of Tech Sergeant (SAP). I would like to share my experience of the whole process. First of all, the whole selection process consists of 4 phases. Phase 1 is aptitude and consists of 45 questions. Regular aptitude classes conducted by our college actually helped me to solve the problems very easily, as the questions were lengthy and would require at least two minutes to read or understand thoroughly. Personally, I started to learn Java programming as it is essential for the selection process. Those who advance from round one are invited to the round of group discussions (8-10 per discussion). The round lasted roughly 45 minutes. The GD assessor believed that it was important to choose a subject on which everyone could agree to move the conversation ahead. "How Sports Contribute to Leadership Skills" was the subject. I did my best to stay on topic and make more persuasive arguments. Fluency is more crucial in order to win this round. Personal HR is the decisive round. For around 30 minutes, it consists of general conversation, questions about my resume, the company, willingness to shift locations, and my family background. In addition, the interviewer asked a number of questions related to the core subject. But the extensive training that our college placement cell provided enabled me to breeze through the interview.

NAME: AKAASHKUMAR. M
DEPT: ECE
BATCH: 2019-23
COMPANY: ELAIT IT

To start off, the Placement team in our college for this academic year 2022 – 2023 has done an excellent job in providing placement offers for our students. I would like to show my gratitude to the student team and the Placement faculty for their never-ending efforts and attention to detail. The various tasks they performed were collaboration with various organizations, organizing various sessions to enlighten students on technical terminologies and various assessment tests for improving our aptitude skills. A major amount of focus was toward clearing the first round of interview held by any organization. Special attention was provided for this by providing various materials for preparation and providing specialized training from Six Phrase for every IT organization that came for placements. Specialized tests like AMCAT and Cocubes were additionally provided. The management collaborated with various training organizations to provide training related to aptitude, verbal, logical reasoning and Programming abilities.

Programming languages like C and C++ were prioritized and we were trained in those. A three-day session was also held specially for SQL and a 10 - day session for Full Stack Development using HTML. To finalize, kudos to the placement team for excelling every year and though there are slight improvements required in time management and the way of response provided, the overall performance of the placement team is quite an appreciable one. I express my gratitude for helping me get an offer in Elait IT with a great package for a fresher and in a place where learning would be prioritized. Thank you for building my steps to the next stage of my life.

NAME: DIVIJA M L

COMPANY: EXPEDITORS

Admits the nervousness and excitement when your mind reminds you of all the insecurities just before walking inside the interview. At this time, our placement cell was taking classes for us, to prepare for all the upcoming companies. I listened to all the classes, took notes, and tried my best to solve the questions given. There were times when I got rejected in the 3rd round or the 2nd round. The very next company was Expeditors International. I cleared the aptitude test and was selected for the group discussion round. The placement coordinators and staff from the placement cell helped organize things for all of us attending the GD. I was able to clear the GD round with confidence. Then we had a technical interview as the 3rd round. Balasundaram Sir and Velu Sir gave us all the instructions we required. They gave us clear instructions on what to prepare and how to answer some questions. All that was left to do was to follow the instructions exactly how they told us to. I revised all the concepts I studied in class. I successfully got through the technical interview. I was waiting to go in for the final interview, with all the nervousness, but this time I had the will that I should never give up. Bala sir asked me, “next, should you be going in? “. He was making such a difference on that day. I went in for the interview, and this time I spoke from a place where I was feeling my best, though I had a fever the whole time. Finally, I cleared the interview. It was an amazing experience to go through and grow through all the ups and downs to learn, unlearn and relearn. I thank everyone who helped me to get to where I am today, especially the staff of the MSEC Placement cell. Thank you!

NAME: MADHUMITHA V
DEPT: ECE
BATCH: 2019-23
COMPANY: EXPEDITORS

The interview process was offline and had four rounds, first round was Aptitude test and the questions were based on Quantitative, Logical and Verbal followed by the group discussion and the topic was "Is work-life balance a myth?". The third round was technical round where I was asked questions about both programming and core subject (microprocessors and microcontrollers). I was also asked to write a program to reverse a number and to explain the algorithm of the program and the final round was the HR interview.

I practiced the aptitude questions both from the websites that provide sample questions and also the materials given by the placement cell. And for programming-learning from the online platforms and practicing the basic programs (Fibonacci, palindrome, prime number, etc). The placement cell has constantly helped us with the materials needed for the preparation and also we had programming training sessions and also company based training in online mode. Both Balasundaram sir and Velu sir constantly helped us with their insights and encouraged us to perform well.

NAME: JEBAN.S
DEPT: ECE
BATCH: 2019-23
COMPANY: EXPEDITORS

I got placed in Expeditors through the campus recruitment. There were four rounds in the selection process - aptitude round, group discussion , technical interview and work culture round i.e., HR interview. I attended three interviews before and got rejected due to various reasons .This taught me an important not to expect anything and avoid over confidence. I prepared aptitude and C programming concepts. I also practiced some basic c programs which is available in internet.

On the interview day I was very composed and calm .the aptitude round was easy because of the placement training which was provided by our college. Then GD where we spoke about work life balance, and I was able to do it . Coming to the interview part I was asked few c related concepts and 2 programs and I did it with focus and finally I cleared the interview. The placement coordinators and staffs from the placement cell helped us a lot .I want to thank the Placement officers, Trainers and my friends who supported and made this happen.

NAME: ABHARNAH.R
DEPT: ECE
BATCH: 2019-23
COMPANY: EXPEDITORS

My preparation was very simple and based on the 20-30-50 ratio. The first 20% is WHAT WE KNOW (skills). The next 30% is WHAT WE SAY (communication) and the final 50% is HOW WE SAY (attitude and confidence). I made it clear that I was interested to be a part of the team and I'm not just looking for a job but for a carrier path to up-skill myself. Technical skills were merely a cherry on top. The college offered great aptitude training and provided step by step guidance also.

"Attitude is equally as important as ability"

NAME: PURVA RESHMI R
DEPT: ECE
BATCH: 2019-23
COMPANY: ZOHO CORP

I got placed in Zoho Corporation through the summer internship recruitment. There were four rounds to get selected for the summer internship- an aptitude round, a basic programming round, an advanced programming round and the final interview. The internship lasted for two weeks, after which I was offered a role in the company. I prepared basic aptitude and programming questions before the recruitment process. Deep understanding of the basics helped me advance. The college placement cell was very supportive of me through the entire process, They helped in providing me with such an opportunity, and helped in managing throughout. I want to thank the placement cell for the immense support.

NAME: O.SASHANTH

BATCH: 2019-23
COMPANY: ELAIT IT

I was not much bright and interested with programming languages and stuff , but I always wanted to get placed in a good company be it my core oriented or IT oriented. So , I started my preparations at the time of 5th Semester by reading necessary books, journals , watching aptitude training videos consistently. This helped me during the placements and it made it easy for me to crack some of the written tests. The placement training provided by the college's placement cell was also useful in brushing up these concepts .

The number of companies in which i cleared was many but I always lacked in the programming concepts asked during technical rounds. This motivated me to upskill myself in programming skills and technical knowledge. The Professional Communication classes arranged by the placement cell help me to cover up the minor flaws I had in my communicative skills.

In the month of October I got placed in Elait IT Technology at the beginning of 7th Semester. There were 2 rounds in total where the rounds were aptitude, technical cum HR interview. I cleared aptitude round as it was wasy for me. The interview was quiet challenging, the interviewer was impressed by my technical skills and wanted to know more about my projects and also tested me from my area of interests which were mostly core related subjects. He tested my programming skills too, which was bit easy for me due to coaching arranged at my college. Finally, i received the offer letter around 2nd week of October.

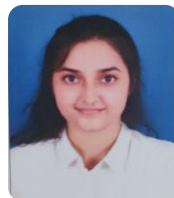

The College Placement Cell was very motivative and supportive in arranging placement trainings . They gave us valuable information about the companies which were coming to campus which helped me in HR interview. They kept guiding us and the efforts of placement commanders of my class also needs to be appreciated . I would like to thank my placement officers and also the placement commanders of all the departments who worked hard for us and thus inspired us to do well at our interviews. Thank you, everyone!!

NAME: S.SWETHA

BATCH: 2019-23
COMPANY: ZOHO CORP.

I got placed in Infosys during 4th year of engineering. I applied through infytq 2022 and got the opportunity to get an interview for the system engineer role. During my preparation ,I improved my knowledge of the subjects in my curriculum ECE. I also learnt C ,SQL ,Python ,DBMS and Html. I also referred the previous year Infosys interview questions which gives some clarity for my preparation . During my interview, I was tested on my knowledge on programming and some basics of python, C, Ooops concept ,DBMS and also sql. I was also asked to run a program on sql. There were also questions related on my area of interest which I have mentioned in my resume. Our college placement provided company specific training which made our preparation more efficient. Mock interviews, Group discussions were conducted by the college.

This training not only helped us to gain confidence, but also helped us to perform good in interview. Placement officers were very helpful in providing us valuable information regarding the upcoming companies. They provided us a complete support to get placed. They made sure that all the students are job-ready and skilled. We also had a full stack development program in which we were taught about front-end and back-end development which helped me learn a new skill. Whenever I had any query, our placement officers would be ready to help me out in solving the issue. Even during the placement drive, I received complete support from the college management.

NAME: PRACHI SHARMA.R

“Every single step of failure took me a step closer to my success”. The journey from preparing myself and polishing my technical and analytical skills to a gob smacked news of getting placed was filled with thorns and obstacles. Firstly, I prepared and brushed up my technical skills and then started working towards my aptitude knowledge. Since it was a core company, I made sure to refresh my knowledge in the field of electronics and microprocessor and microcontroller. This helped me greatly to clear all my rounds one after the other with zeal and confidence. Placement cell and college were very supportive throughout my journey.

We used to receive all kinds of preparatory materials which helped me a lot. Frequent personality and development training which were conducted from time to time really helped me boost up my confidence. With a strong gesture of respect and appreciation I want to thank my college and my college staffs for continuous support and guidance. This milestone would never be possible without your guidance.

“Success and failure are two sides of same coin it depends on how hard you try to turn failure into success in tough times”. Hi, this is Pragya Sharma of 4th year ECE-B. I got placed in EmbedUR and talking about my experience, I was all nervous but gave my best shot, because I was prepared on my side and confidence is what is needed in the end. First round was an online test followed by two round of GDs and fourth was an HR interview. GDs were technical based with which I was a bit confident since my college helped in brushing up the concepts which we’ve already learnt.

During HR interview, they looked up for communication skill and determination of student was tested on taking a software engineer job as career. They were certainly satisfied with my way of presenting myself and they could see how hard I was trying to seize this opportunity. A personality development training was conducted in our college on how to improve your personality and confidence which leveled up my skill and I am certainly grateful to my college which made this happen.

NAME: UTHRA T K
DEPT: ECE
BATCH: 2019-23
COMPANY: EmbedUR

As a very interested student into my core (electronics and communication), I kept myself learning the basics of them strongly throughout the semesters. My professors at college have made a greater impact on my liking towards the niche areas of my department of engineering. In addition to learning the core basics, I did courses in Artificial Intelligence and Machine Learning as they are an important skill needed by the industry. I also equipped myself with programming languages python and C. During my 3rd year of engineering I got placed in a core company embedUR systems. The starting rounds of the placement drive were challenging which tested our knowledge on the basics and communication skill.

This being the first interview that I attended, I was clueless yet tried to answer the questions I was put forth in the best way possible. The whole interview process tested us in various aspects like knowledge, internship experience, projects, paper presentations and communication skill. The College Placement Cell was very supportive in arranging placement trainings that gave us an idea of the way we should be presenting ourselves to an interviewer. Especially I would like to thank our Placement officers who motivated me to attend the placement drive without any fear. Our placement officers provided us with information about the companies. They kept guiding us through reviews from our performances in mock tests which helped in improving our skills.

BATCH: 2019-23
COMPANY: EmbedUR

I got placed in EmbedUR during the 3rd year of engineering. The selection consisted of four rounds. The first round was based on aptitude and coding. And followed by two technical rounds and last was HR interview. The college provided placement training which included aptitude, technical and verbal. The training provided in the college helped me to clear the first round and subsequent technical rounds.

My interview preparation involved getting good knowledge of the subjects in my curriculum ECE. I learnt C, C++ and Python. During my interview, I was tested on my core knowledge on the topics like Microprocessors, Microcontrollers, Communication Networks and Electronics.

Our college placement cell provided company specific training which made our preparation more efficient. We also had a full stack development program in which we were taught about frontend and backend development. They also conducted mock interviews and group discussion which helped us gain insights.

Placement officers were very helpful in providing us information about the upcoming companies. They also guided us on how to prepare for the companies. Whenever I had any query, our placement officers would be ready to help me out in solving the issues.

NAME: SANDHYA.M
DEPT: ECE
BATCH: 2019-23
COMPANY: VIRTUSA

Failure is the opportunity to begin again more intelligently. My first phase of preparation was on aptitude (quants and logical). For that I solved some questions which have been taught during the training class in our college and referred some websites. And I started learning some basic programming concepts. I started with python since it was very beginner friendly and I moved on to C. In a programming language both concept and a practice in coding is important. And I learnt OOPs concepts to understand the language in a more clear and precise way. And our college taught us some basics in Front end web development and SQL.

Our college and placement cell were very supportive throughout my journey. We used to receive all notes, study materials and guidance from our placement cell. Career guidance and personality development session were conducted by our college which was very helpful to improve my soft skills. Our college provides ample of opportunities to improve my technical and soft skills. I value the insights and guidance the college provided for us. I want to thank my college and the placement cell for the continuous support. This would not be possible without your support.

NAME: SRI GAYATRI M N
DEPT: ECE
BATCH: 2019-23
COMPANY: VIRTUSA

My first phase of preparation was on aptitude & logical for that I have referred the website indiabix and I have just worked out on the material which is provided by our college and also referred the questions which have been taught during the training class. Then I have just gone through some very basic programming questions which have been frequently asked in most of the companies for example: palindrome, reverse a string, patterns etc., The basic understanding is very important in case of coding and I have chosen python to learn coding as it was very beginner friendly.

Once we have become good in basics then we can grab other programming languages also. For the case of interviews I have just gone through the material which was sent in the college group once it consists of the basic as well as personality check type of questions and then I have watched some model interview scenarios in youtube. After these preparations, side by side I have updated my resume. The resume may or may not play an important role during selection. Before adding any points in resume I just think whether I can be able to answer the basic questions that may arise from that point because adding more number of points is not important. In case of my interview experience in the company Virtusa the most of the questions were from my resume and few questions from programming. The programming questions in which they didn't expect to solve the problem they just want the idea from me to solve that.

NAME: VIJAYASHREE.V
DEPT: ECE
BATCH: 2019-23
COMPANY: Infosys

I got placed in Infosys during 4th year of engineering. My interview preparation involved getting a good knowledge of the subjects in my curriculum (ECE). I also learnt C, python, Html . During my interview, I was tested on my knowledge on programming and some basics of python C , C++ and also html. I was also asked about the areas of interest which I mentioned in my resume. There were also questions related to software. There were also some HR questions which I mentioned in my resume, and even more some company related HR questions. Our college placement cell was very helpful in training the students to be ready for placement exams. We were provided with company specific training which made our preparation more efficient. Mock interviews, Group discussions were conducted by the college which not only helped us gain confidence, but also helped us gain insights.

NAME: SRUTHI.S

DEPT: ECE
BATCH: 2019-23
COMPANY: INDIUM SOFT.

My journey of being placed in a reputed company was not an easy task. I had to brush up on my skills and had to improve my technical and analytical skills. First of all, I self-analyzed myself and understood my strengths and weakness for both aptitude and technical rounds. I always focused to be strong on the basic concepts and practice more on topics which is important. As my interest was in software I concentrated more on the coding part. Always know about the technologies used by the company you are applying for and prepare based on them. This was the major reason why I was able to crack all the rounds during my interview process.

Always be confident when answering the questions as your attitude and confidence will also be checked during each and every round. The placement cell has been a great support for me from the beginning. Being an ECE student I had to study my core subjects and at the same time prepare separately for software companies which were very hectic. But our placement cell provided us with the right training and also the materials for our preparation which helped me to balance both studies and placement. Most importantly, our placement cell staff believed in us and always encouraged us to achieve more so I will always be thankful to my college and to our staffs.

As I was very keen to get placed within campus, I started my preparations at the time of 5th Semester itself by watching aptitude training videos in YouTube at every weekends consistently. This helped me during the time placement training where it was easy for me to understand many concepts quickly and efficiently, which in turn was very handy during placement drive.

I wanted to upskill myself in communicative skills and also academically differentiate myself with other by powerful resume. I got placed in Indium Software Private Limited at the beginning of 7th Semester. There were 3 rounds in total where the rounds were aptitude, technical interview and HR interview. I cleared aptitude round and got selected for technical interview. The interview was quite challenging, the interviewer was impressed by my resume and asked about internships, projects, courses and area of interest. He tested my communicative and technical skills equally at a hard level. He asked me many tricky questions but I answered that efficiently due to my effective preparations. Then I got selected for HR round where it was just accepting the terms of the company.

The College Placement Cell was very supportive in arranging placement trainings that gave us an idea of the way we should be presenting ourselves to an interviewer. They gave us valuable information about the companies which were coming to campus which helped me in HR interview. They kept guiding us through reviews from our performances in mock tests which helped in improving our skills. I would like to thank my placement officers they were very supportive and encouraged me to attend placement drives without any fear.

NAME: VIGNESH A
DEPT: ECE
BATCH: 2019-23
COMPANY: ELAIT IT

As I was very keen to get placed within campus, I started my preparations at the time of 5th Semester. At that time The College Placement Cell started to conduct training classes to train us in aptitude, communication, mock interviews etc. After college I would practice some aptitude questions in my home which helped me to understand many concepts quickly and efficiently.

My first placement drive was Big Think Code which was a software company came during 6th semester. I cleared aptitude round easily but being my first campus drive, I was very nervous hence couldn't able to communicate my answers efficiently in technical round. After getting rejected by that company, I wanted to upskill myself in technical skills.

Then later I got placed in Elait IT Technology services. There were two rounds in the recruitment process. I cleared the first round which is aptitude round and later I was called for an interview by the company. I started to prepare for my interview and even my friends were helpful to me. After clearing the interview round I was selected and the offer letter was given.

The College Placement Cell was very supportive in arranging placement trainings that gave us an idea of the way we should be presenting ourselves to an interviewer. They gave us valuable information about the companies which were coming to campus which helped me in HR interview. They kept guiding us through reviews from our performances in mock tests which helped in improving our skills. I would like to thank my placement officers they were very supportive and encouraged me to attend placement drives without any fear.

“

Getting hired is the most important people function you have, and most of us aren't as good at it as we think. Refocusing your resources on getting better will have a higher return than almost any training program you can develop.
